GO GLOW!

L'abbronzatura dell'estate 2024 è illuminata. Protetta dai filtri efficaci (almeno Spf 30) di oli, creme e fluidi riflettenti, emana bagliori dorati. A scaldare il colore pensano, poi, gocce magiche che aggiungono luce al sole

Oltre ai raggi Uva e Uvb, esistono gli ultravioletti di tipo C. Con un'energia elevata, ma una bassa lunghezza d'onda, (tra 100 e 200 nm) sono assorbiti dallo strato di ozono che circonda la Terra. Continuiamo, dunque, a concentrarci sui primi due. Almeno per ora.

Testo Cristiana Provera - Foto Mikael Schulz

QUERERLO TODO... Y, ALGO MÁS

La industria se afana para condensar múltiples beneficios en un solo producto. Ya sea en tratamiento o en maquillaje, la demanda exige resultados que abarquen el conjunto.
